Project Overview

SELECTED SCENARIO

AI-Assisted Résumé Screening

PURPOSE OF THE APP

To automate and standardize the résumé screening process for banking roles. BankScreen ensures fair, fast, and compliance-driven hiring decisions by evaluating candidates against strict, rule-based criteria and providing AI-generated insights.

Project Overview (Continued) — CLOs & Tools

Course Learning Outcomes

CLO 4

Build a functional AI-powered application using no-code/low-code platforms to solve a specific business problem.

Alignment

BankScreen directly addresses this by utilizing Lovable to create a fully functional, AI-integrated résumé screening tool without writing traditional code.

Tools & Technologies

Lovable

Primary no-code platform used for UI design, frontend development, logic implementation, and AI integration.

Excel

Excel used as initial database for applicant data, scoring criteria, and managing application states.

ChatGPT

Used for generating the end-to-end process diagram and refining AI Assistant prompts.

Problem Statement

TARGET USERS

HR Recruiters and Hiring Managers in Banks.

IMPACT OF NOT SOLVING

Banks risk hiring underqualified candidates for sensitive roles (e.g., Compliance Officer, AML Analyst), leading to regulatory violations, financial losses, and reputational damage.

KEY POINTS

- 01** Manual résumé screening is time-consuming and inconsistent across reviewers.
- 02** No standardized scoring system leads to subjective and biased hiring decisions.
- 03** Recruiters struggle to efficiently filter large applicant pools for compliance-heavy banking roles.

Proposed Solution

BankScreen provides a comprehensive, AI-driven platform to streamline the résumé screening process for banking roles, ensuring objective and efficient hiring.

Centralized Dashboard

A unified interface for HR recruiters to view all applicants, track statuses, and monitor overall hiring metrics at a glance.

Automated AI Scoring

Evaluates candidates instantly against 9 strict banking criteria (e.g., AML/KYC knowledge, security clearance) to generate an objective score out of 100.

Smart Filtering

Allows recruiters to dynamically sort and filter large applicant pools by position, experience, and clearance level without manual review.

Automated Workflows

Triggers automated, pre-filled approval or rejection emails based on recruiter decisions, ensuring prompt and professional communication.

AI HR Assistant

An integrated chatbot that provides role-specific interview questions and analyzes candidate profiles to support HR decision-making.

System Architecture / Process Diagram

Team Roles & Collaboration

Collaboration Tools

WhatsApp and telegram Group

One drive to share the PowerPoint and word document

Conflict Resolution

Team decisions were made by group discussion and majority agreement during check-in meetings.

Task Distribution

Team Member	Tasks	Tools Used
Nourah Abdulla	Visual theme customization, Dashboard screen, Smart Filters, Process Diagram	Lovable, ChatGPT
Maryam Ali	AI scoring logic, Notification system, AI Assistant, Email automation, Scoring Criteria screen, QA Testing	Lovable, Gemini
Hessa Khalfan	Workflow logic (Shortlist/Accept/Reject), Add New Candidate form, Data management, Score Breakdown, UAT Testing	Lovable, Excel

App Demonstration

AI-POWERED DASHBOARD

Logic Involved & Feature Name

Aggregates real-time data from all 120 candidates total count, average AI score, shortlisted count, and top 5 candidates by score.

Why We Built This

To give HR managers an instant wider view of the entire hiring workflow without opening individual records.

UX Impact

Reduces decision time by surfacing the most critical metrics on the home screen.

App Link

<https://bankscreen.lovable.app>

Logic & AI Integration

AI ASSISTANT PROMPT

1. INPUT

HR question or candidate profile selection

2. PROMPT

"You are an expert banking HR consultant. Answer the following question: [User Input]"

03. EXPECTED OUTPUT

Structured, role-specific HR advice or candidate analysis

SCORING LOGIC RULES

Lovable Scoring Logic

```
If Education ="PhD" →+14 pts
```

```
If Education ="Master's" →+10 pts
```

```
If Education ="Bachelor's" →+6 pts
```

```
Score_Exp =Years ×2 (max 25)
```

```
If AML_KYC ="Yes" →+10 pts
```

```
If Clearance ="Top Secret" →+18 pts
```

Challenges & Solutions

CHALLENGE	WHY IT HAPPENED	SOLUTION
Scoring logic complexity	9 criteria with different weights needed to be consistent across all candidates.	■ Mapped all criteria in the Scoring Criteria screen and tested with sample candidates.
Ensuring data accuracy	Recruiters could enter incomplete data, causing the AI scoring to fail or be inaccurate.	■ Added required field validation (*) on the Add New Candidate form.
AI Assistant response quality	Generic prompts gave vague, unhelpful answers that were not suitable for banking HR.	■ Used specific, role-based prompts to get banking-relevant responses.
Balancing workload fairly	Different features had different complexity levels, making it hard to divide work equally.	■ Divided tasks by specialization: UI, AI/Automation, and Data/Workflow.

Reflection — Nourah Abdulla

Technical Contribution

- Visual theme customization and layout
- Dashboard screen configuration
- Smart Filters setup
- Process Diagram generation

Challenges Faced

Ensuring the dashboard layout was clean and not cluttered with too much data, while still providing all necessary metrics for HR managers.

AI Assistance Used

Used ChatGPT to generate the end-to-end process diagram and to brainstorm clean layout ideas for the dashboard.

Skills Developed

- UI/UX design principles
- Prompt engineering for diagrams
- Lovable layout configuration

Reflection (Continued) — Nourah Abdulla

COURSE LEARNING OUTCOME 4 (CLO4)

"Build a functional AI-powered application using no-code/low-code platforms to solve a specific business problem."

How I Achieved CLO4

- ✓ **No-Code Platform:** Used Lovable to design the BankScreen app.
- ✓ **AI Integration:** Implemented Smart Filters and dashboard scoring.
- ✓ **Business Problem Solved:** Centralized résumé screening for HR.

Reflection — Maryam Ali

Technical Contribution

- AI scoring logic & Notification system
- AI Assistant & Email automation
- Scoring Criteria screen
- Overall System Testing (QA)

Challenges Faced

Ensuring the AI Assistant provided specific, banking-related HR advice rather than generic responses, which required careful prompt engineering.

AI Assistance Used

Used AI Assistant within Lovable to refine the scoring logic formulas and generate the HR prompt templates for the chatbot.

Skills Developed

- AI prompt engineering
- Logic configuration in no-code platforms
- System testing and Quality Assurance

Reflection (Continued) — Maryam Ali

COURSE LEARNING OUTCOME 4 (CLO4)

"Build a functional AI-powered application using no-code/low-code platforms to solve a specific business problem."

How I Achieved CLO4

- ✓ **No-Code Platform:** Configured the complex AI scoring logic and automated notification systems entirely within the Lovable platform.
- ✓ **AI Integration:** Set up the AI Assistant chatbot and defined the rule-based scoring engine to evaluate candidates dynamically.
- ✓ **Business Problem Solved:** Automated the manual evaluation of candidate qualifications, saving HR time and reducing human bias in initial screening.

Reflection — Hessa Khalfan

Technical Contribution

- Workflow logic (Shortlist/Accept/Reject)
- Add New Candidate form setup
- Applicant data management
- Score Breakdown panel configuration
- User Acceptance Testing (UAT)

Challenges Faced

Managing the state of candidate data across different screens and ensuring the workflow buttons updated the database correctly without errors.

AI Assistance Used

Used ChatGPT to generate comprehensive test cases for the AI Assistant and to refine the logical structure of the candidate workflow.

Skills Developed

- Database management (EXCEL)
- Workflow automation logic
- Quality assurance and UAT

Reflection (Continued) — Hessa Khalfan

COURSE LEARNING OUTCOME 4 (CLO4)

"Build a functional AI-powered application using no-code/low-code platforms to solve a specific business problem."

How I Achieved CLO4

- ✓ **No-Code Platform:** Successfully utilized Lovable to design and configure the Add New Candidate form and workflow logic without writing traditional code.
- ✓ **AI Integration:** Tested and validated the AI Assistant's responses to ensure accurate, role-specific HR advice was provided to users.
- ✓ **Business Problem Solved:** Streamlined the candidate data entry and decision workflow (Shortlist/Accept/Reject), improving overall HR efficiency.

Collaboration & Professional Conduct

COMMUNICATION & SUPPORT

Communication Platforms

We utilized a dedicated WhatsApp and Telegram group for daily updates, quick problem-solving, and coordinating our work sessions.

Shared Workspace

We used OneDrive to share and collaborate on the PowerPoint and Word documents, ensuring all team members had access to the latest versions at all times.

Professional Behavior

Maintained respectful communication, divided tasks fairly based on individual strengths, and actively supported each other during technical challenges.

TEAM MEETING SCHEDULE

April 24

5:07 PM – 9:07 PM

April 27

11:55 AM – 1:44 PM

April 29

12:07 PM – 2:09 PM

April 30

4:00 PM – 10:00 PM

Collaboration Screenshots

The screenshot displays a Microsoft Teams meeting interface. At the top, a toolbar includes icons for 'Take control', 'Pop out', 'Chat', 'People' (3 participants), 'Raise', 'React', 'View', 'Apps', 'More', 'Camera', 'Mic', 'Share', and 'Leave'. Below this is a Word document titled 'C6 2603_Final Project Description_232530_Group Report_Template.docx'. The document's ribbon shows 'File', 'Home', 'Insert', 'Draw', 'Design', 'Layout', 'References', 'Mailings', 'Review', 'View', and 'Help'. The 'Home' tab is active, showing font settings (Arial, size 105) and paragraph styles (MdHeading, MdListItem, MdParagraph). The main content area displays a project task sheet for 'Higher Colleges of Technology'.

Project Task/Question

Component	Task/Question	Marks	Expected Deliverables
Group marks	Q1. Define and Design Business Process	15	Deliverable 1 - Business Process Description
	Q2. Develop and Implement the Application	25	Deliverables 2 & 3 - App Build + Logic / Power Fx Features
	Q3. Automate and document the Workflow	10	Deliverable 4 - Workflow Automation + Documentation
Individual (60 marks)	Q1. App Demonstration and Contribution	20	Deliverables 2-4 - App Build / Workflow / Presentation
	Q2. Reflection and Learning	15	Deliverable 5 - Reflection & Critical Analysis
	Q3. Oral Presentation & Q&A	15	Deliverables 6-8 - Oral Presentation / Collaboration / Q&A

At the bottom of the document, it shows 'Page 5 of 15', '3065 words', 'English (United States)', 'Text Predictions: On', 'Accessibility: Investigate', and a zoom level of 62%.

On the right sidebar, three team members are listed with their initials in colored circles: MA (Maryam Ali Abdulla Bin Hamdah Alai...), HA (Hessa Khalifa Ahmed Saudah Al Ali...), and NA. A small 'i' icon is visible below the NA member.

At the bottom of the Teams window, a chat bar shows a message from 'Maryam Ali Abdulla Bin Hamdah Alai(H00535836)'.

TEAM COLLABORATION VIA Teams

Conclusion

THE PROBLEM

Manual résumé screening in the banking sector is time-consuming, prone to human bias, and inefficient when handling large volumes of applicants.

THE SOLUTION

BankScreen provides a centralized, AI-powered platform built with Lovable, automating the evaluation process using transparent, rule-based scoring criteria.

THE IMPACT

HR recruiters can now instantly view ranked candidates, utilize an AI Assistant for role-specific advice, and automate communication workflows seamlessly.

KEY LEARNING

Successfully achieved CLO4 by demonstrating how no-code tools and AI integration can solve real-world business problems efficiently and effectively.

Future Enhancements

01

Direct Résumé Parsing

Implement OCR and document processing to allow candidates to upload PDF or Word résumés, automatically extracting data into the system without manual entry.

02

HR System Integration

Connect BankScreen with enterprise HR platforms like Workday, SAP, or Oracle to ensure seamless data synchronization across all banking departments.

03

Advanced AI Interviewing

Enhance the AI Assistant to automatically generate customized interview questions targeting a candidate's specific weak points or missing skills.

THANK YOU
